

Video Surveillance and Access Control Design & Installation

## Government

U.S. General Services Administration

For a complete listing of the Security Systems products and related literature, Look for our upcoming GSA account. We are currently in the GSA Approval process!

## State and Federal Buildings

As the Security Industry rapidly turns to digital networks to satisfy increasing demand, Oliver Communications continues to design, develop and deliver the most reliable, cost-effective security system solutions. We offer a complete line of Video Surveillance and Access Control Systems with a reputation for quality and performance.

Whatever your security concerns, Oliver Communications has a solution. Cameras can be placed at the entrance and exit to a public building to record who comes in and out 24 hours per day. This footage can be used to deter criminals and as evidence if a crime occurs. It can also provide statistical evidence regarding how many people use public amenities such as museums, libraries and job centers. Cameras outside public buildings can help prevent vandalism and increase security for the people living and working inside the buildings as they arrive and leave.

In emergency situations it is quite common for police and fighters to be granted access to video from the cameras within a given facility. This enables them to pinpoint exactly where the emergency is occurring and work out who most needs their assistance. Network video thus greatly improves their chances of handling a crisis effectively.

Oliver Communications will design and install a system that fits your needs. Oliver has a product portfolio that can deliver in any situation: Across town between buildings, fiber ties between multiple buildings, wireless transmission of data or video, or just a small network in a single building. Oliver can provide the following:

- Cabling Infrastructure (underground or aerial)
- New poles, Manholes, Hand holes,
- Fiber backbones, Copper backbones.
- Wireless communications (Mesh, PTP, PTMP, Mobile)
- Security desks to full command centers
- Vandal proof cameras and housings
- Surveillance cameras for every situation (Day, Night, Megapixel, Long range, thermal, etc.)
- Video Management Software / Video Analytics
- Access Control (Card readers, key pad entry, biometric readers)

## Prisons

Prison security is of the highest priority in today's society. Oliver Communications along with its strategic partners can provide any aspect of prison security. Oliver's premier video management software platform allows for full integration with access control throughout the prison. Access can be controlled by various security levels and restrictions, while capturing every move on video. Events can trigger alarms that create a series of notifications and pre-determined responses. Let Oliver Communications bring your prison security to the next level.
