

## Video Surveillance and Access Control Design & Installation

### Transportation

On the track, in the water or on the highway, commuters and travelers should feel safe. From highways, bridges and tunnels to airports, railways, truck stops, to bus depots and mass transit stations, Oliver Communications has a video surveillance and security solution to fit specific requirements and budget. It's the protection you need to make the commuters in your city feel safe and secure. Oliver's systems, quality and reliability will give you the peace of mind you deserve. Oliver Communications a solution for every type of video surveillance your transportation entity may require. Whether you're under construction, renovating facilities or upgrading an existing security system, Oliver Communications can help you through the planning, design, installation and implementation of your system. Our sales team will work with you to identify your individual needs and the specific equipment to fit them, while staying within your working budget. To protect all your most important assets with proven performance, quality and reliability choose Oliver Communications!

#### **Highways**

Monitor and communicate with motorists. Your surveillance system will allow you to measure vital traffic data, then transmit that information to roadside display signs to warn drivers of what's ahead such as accidents, delays, road construction and weather conditions

#### **Toll Highways**

Special license plate capture cameras can record and store data that can be integrated with the toll collection systems.

#### **City Traffic Surveillance**

Monitor traffic, incidents, events and reroute vehicles to roadways with lighter traffic. Create systems that automatically notify Public Safety officials immediately

When it comes to securing our borders, ports and airports, Oliver Communications is all business. We can provide a complete surveillance and access control package to suit any application, anywhere you need. With our portfolio of products and 18 years of communication infrastructure installation experience you'll be sure to receive a comprehensive design that covers all your security concerns. We have long range surveillance, thermal image, satellite and microwave, wireless, and solar products to cover miles of territory.

#### **Airports, Railways and Subways**

Oliver Communications video surveillance systems can view and record all areas of the airport. Advanced technology in video analytics allows you to watch parking lots, luggage areas, ticket lines, etc. and receive alarms due to suspicious behavior such as a package left behind, movement towards a restricted area, or people or vehicles heading the wrong way. Video, audio and other vital data can be forwarded to the designated security personnel or company executives while also being recorded. Oliver's state of the art software will allow viewing of multiple stations and locations over an IP network.

#### **Sea Ports**

Monitor seaport traffic with long range outdoor motion detection. Thermal image cameras can detect vessels and watercraft from miles away.
